

**OLIVINE**

Software Co., Ltd

奧凌資訊有限公司

OliveSeed. Day1.

Aaron Kuo , [a.kuo@olivinesoft.com](mailto:a.kuo@olivinesoft.com)

**Deliver Beyond Expectation.**

# HELLO OLIVESEED

Olivine Software Co., Ltd..

## What we do ?

- Web Application
  - Web-based Information System
  - Website, Web 2.0 platform
  - Mashup Applications
- Provides Open Source solutions
- We follow W3C standards
- Agile Development
- Software as a Service

## About Olive Seed

- We are all interest in web application development.
- We talk about web development and
- The skills we needed as a web developer.
- The issues contained :
  - PHP & MySQL ,
  - Object Oriented Programming and
  - Design Patterns
  - ZendFramework & Doctrine
  - Front-End Engineering
  - Anything about web, such as SEO, SNS, cloud computing, AWS, web mining... etc..

## Outline

- Day 1 - Getting Start
  - Hello OliveSeed.
  - About Web Development Part I.
  - Quick Guide for PHP Programming
- Day 2 - Zend Framework Part I.
  - Introduce to MVC.
  - Library v.s. Framework.
  - Getting Start to Zend Framework
- Day 3 - Zend Framework Part II.
  - About Web Development Part II.
  - Useful Components

## Outline(cont.)

- Day 4 - Doctrine 1.0 - Part I.
  - Introduce to ORM.
  - Model Building and Migration.
  - Record, Collection and Table
  - Validator.
  - Dql.
- Day 5 - Front-end Engineering.
  - XHTML, CSS and Javascript.
  - jQuery.
- Day 6- Project of Olivinesoft.
  - Introduce to OliveTree and core library.
  - Case study.
  - About Web Development Part III.

## Outline(cont.)

- Day 7 - More about ZF and Doctrine.
  - Zend Framework Part III.
  - Doctrine 1.0 - Part II.
    - Inheritance or Polymorphism.
    - Hook, Template and Behavior.
- Day 8 - Design Pattern
  - Command Queue Pattern. (Message Queue)
  - Observer Pattern and Finite State Machine (FSM).
  - Singleton, Adapter and Factory Patterns.
- Day 9 - Other Topics
  - HTML5 and CSS3. Node.js .
  - Open source solutions.
  - Crawler, Full-Text Search and Information Retrieval.
  - Data and web mining.
  - AWS, NoSQL database.

DAY 1.  
GETTING START

## Day I, Getting Start.

- Hello OliveSeed.
  - About OliveSeed
  - Introduce Olivine Software Co., Ltd. .
- About Web Development Part I.
  - Web development process.
  - Tools introduction and
  - Techs. we need.
- Quick Guide for PHP Programming.
  - How to build environment.
  - PHP syntax & Object oriented programming.

# WEB DEVELOPMENT

About Web Development Part I.

## Web Development

- Web Development Process
- 4 Tiers Application Environments
- Web Application Deployment

## Web Development Process

- Information / Requirement Analysis
  - Documents
- Specification Building
  - Site-Map
  - Wireframe
  - ERM, Database Schema.
- Design and Feedback
  - Grid System
- Content Writing
  - CSS and XHTML Coding.
  - W3C Validation

## Web Development Process (cont.)

- Coding
  - Server-side and Front-end Engineering
  - MVC+Framework
  - Version Control
- Testing
  - Unit Test. UI Test. Cross-browsered Testing
  - Automated Testing Tools
- Promotion
  - SEO, Marketing
- Maintenance and Updating
  - Google analytics
  - Server Monitoring

## 4 Tiers Application Environments

- Development
- Testing
- Staging
- Production

## Web Application Deployment

- Backup current version of production.
- Upload the latest version to server.
- Auto-migrations database schema (if necessary).
- Clear all the caches
  - The compressed js/css files
  - Caches in the memory
- Clear all the temporary files
- Rebuild some temporary files or index
- Distribute the static files (if necessary).
- Restart web service (if necessary).
- Rollback to last version when deployment process failed

## The Tools

- Text Editor or IDE
  - Any text editor.
  - Netbeans, Eclipse, TextMate, Coda, Dreamweaver ...
- A Modern Browser and Debug Tools
- Git :
  - Source code version control system
- XMind and Balsamiq
  - Help to planning, brainstorming and
  - Wireframe mockups
- Others
  - Redmine.
  - Google Apps

# Firebugs - F2E Debug Tools

IE9 is definitely better than IE8 and a step in the right direction, but I don't believe it to be a truly modern browser, and let me tell you why.

By [Paul Rouget](#) -- 15 February 2011

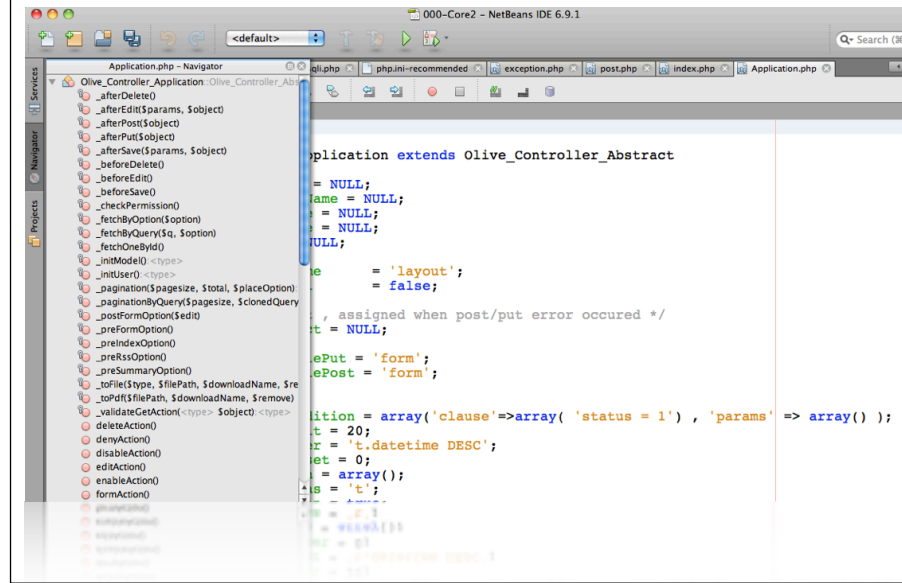

Microsoft is [bragging a lot](#) about HTML5. They are [also suggesting](#) that their HTML5 support is exceptionally good compared to other vendors.

## How well does IE9 support HTML5

In [this article](#), Microsoft explains that tests like [caniuse](#) and [html5tests](#) are not good because they just check for the existence of features, so it's better to use W3C tests.

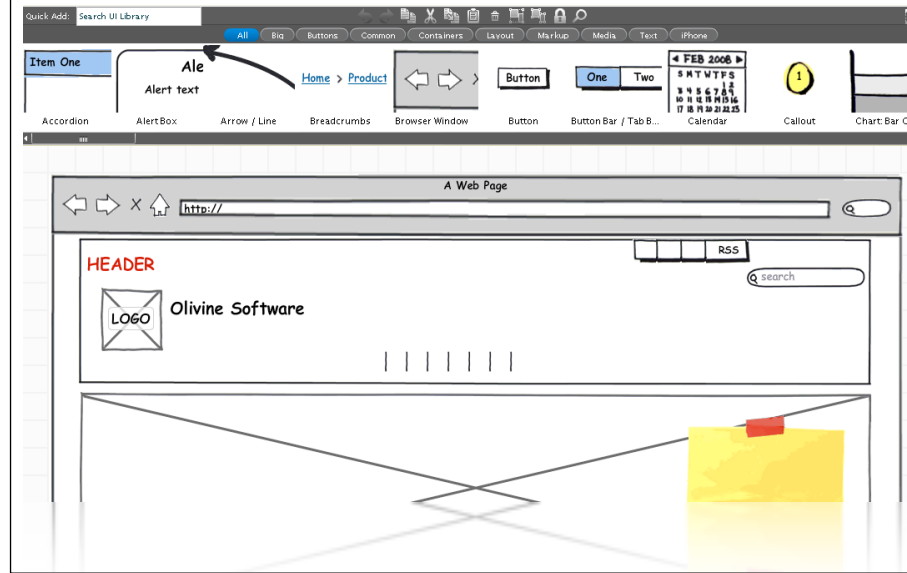

## Netbeans - IDE for developing PHP

# XMind - Mind Mapping

# Balsamiq - Wireframe

## Techs We Need

- HTML and CSS
- Design Sense
- JavaScript
- One of the big three(PHP,.NET,Java)
- Database
- SEO
- Web Server Administration
- Flash ?

## And You also have to know

- Network
- Client-Server
- HTTP

# PHP PROGRAMMING

Development Environment

# PHP Programming

- Development Environment
- PHP Basic Syntax
  - Syntax
  - Types
  - Variables and Constants
  - Operator
  - Expression
  - Control Structures
  - Functions
- PHP and MySQL database
- PHP Object Oriented Programming

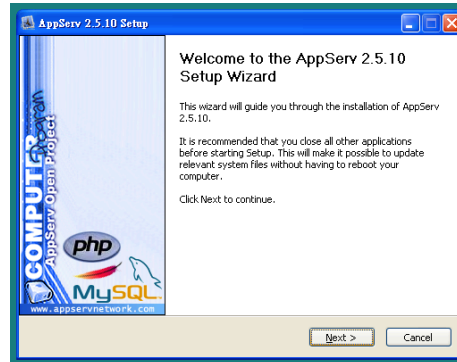

## Your development environment

- LAMP
  - Install Apache,MySQL and PHP
  - Edit the configuration of Apache and PHP
    - http.conf
    - php.ini
- An IDE for yourself
- The Browsers
  - Webkit : Google Chrome or Safari
  - Mozilla : Firefox 3.6+
  - IE 9.0+ (?)
  - Firebug & Google page speed
- Create a Website
  - Apache Virtual Host

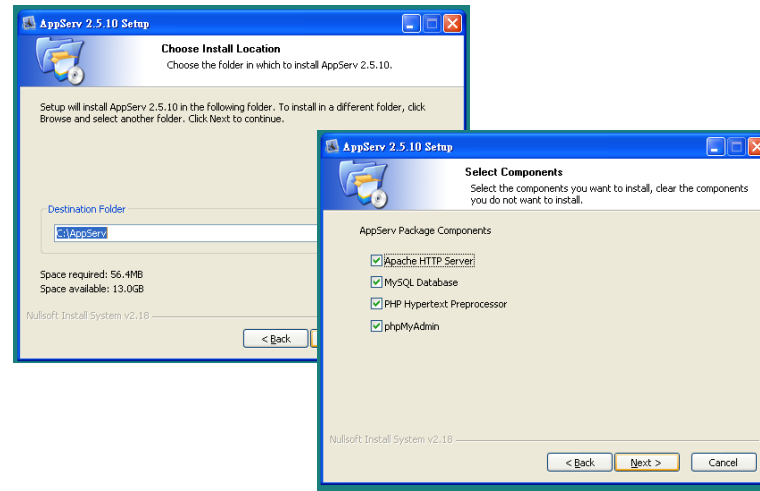

# Install Apache, MySQL and PHP

- Download Appserv and install it

- 

# Appserv. (Apache+MySQL+PHP)

# Appserv. (Apache+MySQL+PHP)

**AppServ 2.5.10 Setup**

**Apache HTTP Server Information**  
Please enter your server's information.

Server Name (e.g. www.appservnetwork.com)  
localhost

Administrator's Email Address (e.g. webmaster@gmail.com)  
aaron.kuo@olivinesoft.com

Apache HTTP Port (Default : 80)  
80

< Back

Nullsoft Install System v2.18

**AppServ 2.5.10 Setup**

**MySQL Server Configuration**  
Configure the MySQL Server instance.

Please enter Root password for MySQL Server.

Enter root password  
\*\*\*\*\*

Re-enter root password  
\*\*\*\*\*

MySQL Server Setting

Character Sets and Collations  
UTF-8 Unicode

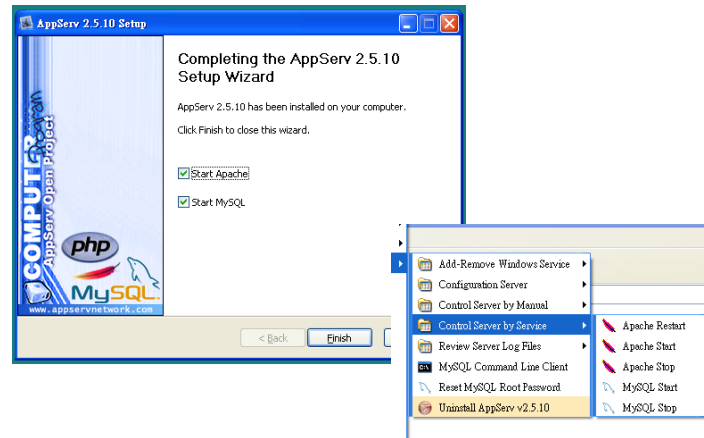

☐ Old Password Support (PHP MySQL API function.)

☒ Enable InnoDB

< Back Install Cancel

Nullsoft Install System v2.18

## Appserv. (Apache+MySQL+PHP)

## Apache Configuration (http.conf)

- config the loaded modules
- config the web directories
- config virtual host

## PHP Configuration (php.ini)

- PHP environment setting
- Config the extensions, ex :
  - PDO & PDO MySQL
  - GD library
  - Multi Bytes String
  - Open SSL ... etc.

```
71 ;extension=pup_mime_magic.dll
72 ;extension=php_ming.dll
73 ;extension=php_mysql.dll
74 ;extension=php_mssql.dll
75 ;extension=php_mysql.dll
76 ;extension=php_mysqli.dll
77 ;extension=php_oci8.dll
78 ;extension=php_openssl.dll
79 ;extension=php_pdo.dll
80 ;extension=php_pdo_firebird.dll
81 ;extension=php_pdo_mssql.dll
82 ;extension=php_pdo_mysql.dll
83 ;extension=php_pdo_oci.dll
84 ;extension=php_pdo_oci8.dll
85 ;extension=php_pdo_odbc.dll
86 ;extension=php_pdo_pgsql.dll
87 ;extension=php_pdo_sqlite.dll
88 ;extension=php_pgsql.dll
89 ;extension=php_pspell.dll
90 ;extension=php_shmop.dll
91 ;extension=php_snmp.dll
92 ;extension=php_soap.dll
93 ;extension=php_sockets.dll
94 ;extension=php_sqlite.dll
95 ;extension=php_sybase_ct.dll
96 ;extension=php_tidy.dll
97 ;extension=php_xmlrpc.dll
```

# Create a Virtual Website

- Apache Virtual Host
  - http://test.local point to C:\Sites\test
  - Restart Apache Service

## Apache 設定

打開你的 Apache 設定檔，加上以下這段設定

先注意有沒有這行

```
NameVirtualHost *:80
```

若已被註解掉請取消註解，若沒有就加上它

## 加入一個新的站台

在 http.conf 檔最下方插入以下這段設定

Windows 環境：

```
<VirtualHost *:80>
ServerName test.local
DocumentRoot "C:\sites\test\"
DirectoryIndex index.php index.html index.htm
</VirtualHost>
```

# Create a Virtual Website(cont.)

- DNS

## DNS 設定

---

這時你已經在本機上建立了一個虛擬站台  
但在瀏覽器網址輸入 test.local 是連不到東西的  
因為世界上根本沒有 test.local 這個網址的存在，所以你的電腦去做 dns 查詢是查不到這個網址對應的主機在哪  
這時，你必須要對本機上的 dns 查詢動手腳，讓 test.local 這個網址指到自己這台電腦  
因此，你修改 hosts 這個檔案

請用文字編輯器打開 hosts 這個檔案  
若是 windows 環境，這個檔案位於 C:\windows\system32\drivers\etc\hosts  
Mac 環境，位於 /etc/hosts

打開 hosts 檔之後，在其中增加一行

```
127.0.0.1    test.local
```

這樣，就會把 test.local 這個網址指向本機，  
而 Apache 服接收到要求時，就會指定連到剛才所設定的虛擬站台的目錄中

# PHP PROGRAMMING

PHP Introduction and  
Programming Language Basic

## PHP

- <http://zh.wikipedia.org/wiki/PHP>
- PHP : Hypertext Preprocessor
- A Server-Side HTML embedded scripting language
- Open Source Software
- Returned to the browsers as plain HTML
- <http://www.php.net/manual/en/index.php>

# Syntax

- Hello world

```
1 <html>
2 <body>
3 <?php
4 echo "Hello World";
5 ?>
6 </body>
7 </html>
```

- Block Tags

- “<?php” and “?”
- escaping from html

```
1 <?php
2 echo "<html><body>Hello World</body></html>";
3 ?>
```

- Use “echo” to print out result
- Use “\$” to represent a Variable
- Use “.” to connect strings
- End statement with “;”

```
1 <?php
2 $name = 'Johnson';
3 echo 'My name is ' . $name ;
4 ?>
```

## Syntax (cont.)

### • Separation

- 一般正常的寫法

```
1 <?php
2 echo 'text';
3 echo 'text2';
4 ?>
```

- 雖有單行輸出，結尾可以省略「;」

```
1 <?php echo 'text' ?>
```

- php 程式結束，結尾省略了 close tag ( ?> )

```
1 <?php echo 'text';
```

### • Short tag

過去在許多 php 環境中，有開放所謂 short tag 的支援，即可以 <? ?> 來做為程式開始結束的寫法  
例如

```
1 <?
2 $m = 3+6;
3 ?>
```

但在新版本的 php 中，已不建議使用；php.ini 中預設即把 Short Tag 的支援關閉  
因此請避免使用 short tag 的寫法

如果遇到別人寫的程式使用了 short tag，若要在你的環境中運行，你必須去 php.ini 的設定中，把這項支援的設定打開

## Syntax (cont.)

- Comments

- PHP Supported C,C++,Unix Shell (Perl style)comments
- # one line : shell style comment
- // one line : c++ style comment
- /\* ....  
multi lines comment ...  
type comments here ...  
\*/

- 單行註解

```
1 <?php
2 // 這是一行註解
3 ?>
```

- 單行註解

```
1
2 <?php
3 # 這是一行註解，
4 ?>
```

- 多行註解

```
1 <?php
2 /*
3 這是多行註解
4 可以寫多行字
5 */
6 ?>
```

# Useful Functions

- exit and die
  - terminate the current script

terminate the current script

```
1 <?php
2 echo 'we are going to be terminated!';
3 exit;
4 ?>
```

or use die

```
1 <?php
2 mysql_query( 'SELECT * FROM database ' ) or die( mysql_error() );
3 echo 'success !';
4 ?>
```

## Useful Functions (cont.)

- `print_r`
  - print human readable information about a variable

```
1 <?php
2 $data = array( 'apple' , 'orange' , 'lemon' , 'banana' );
3 print_r( $data );
4 ?>
```

- `var_dump`
  - Dumps information about a variable

```
1 <?php
2 $data = array( 'apple' , 123 , true , 3.1416 );
3 var_dump( $data );
4 ?>
```

## Types

- Scalar
  - integer , ex : 2012;
  - float, ex : 3.14;
  - boolean = true or false ;
  - string , ex : 'Hello world';
- Mixed
  - Array and Object
- Special
  - NULL
  - Resource

# Array

- The key-value pair (hash structure) ;
- Declare an Array;

## 如何宣告陣列

- 直接宣告陣列

```
1 <?php
2 $data = array( 'Apple' , 'Google' , 'Microsoft' );
3 ?>
```

會自動指定各元素的索引值 ( 0 => Apple , 1 => Google , 2 => Microsoft )

- 也可以自訂索引值

```
1 <?php
2 $data = array( 0 => 'Apple' , 2=> 'Microsoft' , 1 => 'Google' );
3 ?>
```

- 索引值也可以是字串

```
1 <?php
2 $data = array( 'f'=>'Female' , 'm' => 'Male' , 'n' => 'Unknown' );
3 ?>
```

## Array (Cont.)

- Use “[ ]” to access data. ex :

使用 [索引值] 來存取陣列

```
1 <?php
2 $data = array( 'Apple' , 'Google' , 'Microsoft' );
3 echo $data[1] ;
4
5 $x = 2;
6 echo $data[$x];
7
8 $data[3] = 'Oracle';
9 ?>
```

也可以不指定索引值，來 put 資料到陣列中

```
1 <?php
2 $data = array();
3
4 $data[] = 'Apple' ;
5 $data[] = 'Google' ;
6 $data[] = 'Microsoft';
7 ?>
```

## Variables

- “\$” and naming rule.
- “” and “
- Pre-defined Variables
  - \$\_GET, \$\_POST, \$\_FILE, \$\_GLOBAL
  - \$\_SERVER, \$\_ENV; \$\_COOKIE, \$\_SESSION
  - \$argc, \$argv
  - <http://www.php.net/manual/en/reserved.variables.php>
- Variable Scope
  - local, global and static.
- Variable Type Juggling and Casting
- Constants

## \$\_GET and \$\_POST

- HTTP ( Hypertext Transfer Protocol)
  - Request Message
    - Request + Headers + Message Body
  - Response
    - status code
      - 2xx Success, ex : 200 OK
      - 3xx Redirect, ex: 301 Moved Permanently
      - 4xx Client Error, ex : 404 Not Found , 403 Forbidden
      - 5xx Server Error, ex: 500 Internal Server Error
      - 1xx Informational
    - [http://en.wikipedia.org/wiki/List\\_of\\_HTTP\\_status\\_codes](http://en.wikipedia.org/wiki/List_of_HTTP_status_codes)

# Type Juggling

- Type Juggling

PHP 是個相當有彈性的語言，對變數的限制較不嚴謹  
變數型別的判斷，是在執行時才依據 variable 與 operator 來作判斷

```
1 <?php
2
3 $foo = "0"; // $foo is string (ASCII 48)
4 $foo += 2; // $foo is now an integer (2)
5 $foo = $foo + 1.3; // $foo is now a float (3.3)
6 $foo = 5 + "10 Little Piggies"; // $foo is integer (15)
7 $foo = 5 + "10 Small Pigs"; // $foo is integer (15)
8
9 $a = 'car'; // $a is a string
10 $a[0] = 'b'; // $a is still a string
11 echo $a; // bar
12
13 ?>
```

- Type Casting

- (int), (integer) - cast to [integer](#)
- (bool), (boolean) - cast to [boolean](#)
- (float), (double), (real) - cast to [float](#)
- (string) - cast to [string](#)
- (array) - cast to [array](#)
- (object) - cast to [object](#)
- (unset) - cast to [NULL](#) (PHP 5)

# Constants

- Define a Constant

- `define( name , value );` or `CONST name = value;`

你可以在程式中定義常數，常數定義之後，在程式的執行過程不能被修改  
使用 `define()` 這個函式來定義常數，傳入兩個參數，第一個是常數名稱，第二個則是定義的值

```
1 <?php
2
3 define( 'PI' , 3.1416 );
4
5 $r = 30
6 $cycle = $r * PI ;
7
8 ?>
```

- Check whether a given named constant exists

- `defined( name );`
- return true or false.

```
1 <?php
2
3 if ( !defined( 'PI' ) )
4     define( 'PI' , 3.1416 );
5
6 ?>
```

## Constants (cont.)

- Magic Constants
  - <http://www.php.net/manual/en/language.constants.predefined.php>
- Pre-Defined Constant
  - <http://www.php.net/manual/en/reserved.constants.php>

## Operators

- +,-,\*,/,%
- =
- ==,>=,<=,!
- ++,--,+=,-=,\*=,/=
- ||,&&===
- ?
- [http://www.php.net/manual/en/  
language.operators.php](http://www.php.net/manual/en/language.operators.php)

## Expression

- The most important building.
- Almost anything you write is an expression.

```
<?php
function double($i)
{
    return $i*2;
}
$b = $a = 5; /* assign the value five into the variable $a and $b */
$c = $a++; /* post-increment, assign original value of $a
(5) to $c */
$d = $d = ++$b; /* pre-increment, assign the incremented value of
$b (6) to $d and $e */

/* at this point, both $d and $e are equal to 6 */

$f = double($d++); /* assign twice the value of $d before
the increment, 2*6 = 12 to $f */
$g = double(++$e); /* assign twice the value of $e after
the increment, 2*7 = 14 to $g */
$h = $g += 10; /* first, $g is incremented by 10 and ends with the
value of 24. the value of the assignment (24) is
then assigned into $h, and $h ends with the value
of 24 as well. */
?>
```

## Control structures

- if,if-else,if-elseif,if-elseif-else
- for,foreach,while,do-while
- switch
- return, break and continue
- Alternative syntax

一般我們用「{ }」大括號來作為控制敘述結構的區段，  
除此此外我們也可以用「:」符號來代替開始，並以 endif/endfor/endwhile ... 等來作為結束，例如

```
1 <?php
2 if( $a == 5):
3     echo 'A is 5';
4 else if( $a > 10 ):
5     echo 'A is greater than 10' ;
6 endif;
7 ?>
```

## Control structures (cond.)

- “require” and “include”
  - Includes and evaluates the specified file during execution of the script.
  - Includes the reused codes and libraries usually.

```
1 vars.php
2 <?php
3 $color = 'green'; $fruit = 'apple';
4 ?>
5
6 test.php
7 <?php
8
9 echo "A $color $fruit"; // A
10
11 include 'vars.php';
12
13 echo "A $color $fruit"; // A green apple
14
15 ?>
```

- “require\_once” and “include\_once”
  - as the name suggest, it will be include just once.

# Function

- The Concepts
  - Arguments and Return Value.
    - $f(x) = mx + k$
  - Reusable
- User-defined functions
- Variable functions
- Anonymous functions
- Internal functions

## User-Defined Function

- `function functionName( [$arg1 , $arg2 ...] )`

宣告函式時，使用「function」這個關鍵字，

```
function 函式名稱( 參數1 , 參數2 .... ) {  
    // expressions  
}
```

```
1 <?php  
2  
3 function bmi( $height , $weight ) {  
4  
5     $value = $weight / ( $height * $height ) ;  
6     return $value;  
7 }  
8  
9 ?>
```

## Variable function

- Use variable as name of function to call

### Variable Function

---

我們可以用變數的方式來呼叫函式  
例如我們定義了上面的 bmi 函式之後

```
1 <?php
2
3 $call = 'bmi';
4 $my_bmi = $call( 173,60);
5 echo $my_bmi;
6 ?>
```

另外也可用 call\_user\_func 這個函式來呼叫 (callback)

# Anonymous function

- Like JavaScript :

## Anonymous function

---

PHP5 增加了匿名函数，如同 JavaScript 的用法

```
1 <?php
2 $af = function( $h , $w ){
3     return $h / ( $w*$w ) ;
4 }
5
6 $my_bmi = $af( 173,60 );
7
8 ?>
```

## PHP Function Library

- <http://php.net/manual/en/funcref.php>
  - Mathematical
  - Date and time
  - Array
  - String
  - File
  - Language
  - Database / MySQL
  - Image
  - XML
  - Other
    - JSON, YAML, SPL

## Quick View

- Write a Guestbook
  - Index page
  - Post page.
  - Use file system as storage

## Class and Object

- Object Oriented Programming
  - [http://en.wikipedia.org/wiki/Object-oriented\\_programming](http://en.wikipedia.org/wiki/Object-oriented_programming)
  - <http://www.inf.ufsc.br/poo/smalltalk/ibm/tutorial/oop.html>
  - Class and Object
    - methods and variables
  - Interface and Message
- The Four specific object properties :
  - Data Abstraction.
  - Encapsulation.
  - Inheritance.
  - Polymorphism.
- Abstract Class

# Class and Object

```
1 <?php
2 class Player {
3     protected $_name ;
4     protected $_team;
5
6     public function __construct( $name , $team ) {
7         $this->_name = $name ;
8         $this->_team = $team ;
9     }
10
11     public function getName() {
12         return $this->_name ;
13     }
14
15     public function getTeam() {
16         return $this->_team;
17     }
18 }
19
20 $a = new Player( 'James' , 'Miami Heats' );
21 $b = new Player( 'Wang' , 'NewYork Yankees' );
22
23 echo $a->getName() . ' is a player of ' . $b->getTeam() ;
24 echo '<br />';
25 echo $b->getName() . ' is a player of ' . $b->getTeam() ;
26
27 ?>
```

## Exception

- Try and Catch
- Throw an Exception

## Quick View II

- Write a Guestbook with OOP
  - Class Guestbook
  - Index Page => page() method.
  - Post page. => post() method.

# PHP PROGRAMMING

PHP & MySQL Database

## MySQL Database

- MySQL Database
  - DB Name,
  - User Name
  - User Password,
  - Host
- phpMyAdmin
  - create database and table

## PHP & MySQL

- <http://php.net/manual/en/book.mysql.php>
- mysql\_connect
- mysql\_select\_db
- mysql\_query
- mysql\_num\_rows
- mysql\_fetch\_
  - mysql\_fetch\_rows
  - mysql\_fetch\_assoc
  - mysql\_fetch\_array
- mysql\_insert\_id

## MySQL, MySQLi & PDO MySQL

- PHP-MySQL
  - Procedural Style only
  - `mysql_real_escape_string`
- MySQLi
  - Effective Improvement
  - Security : prevent from SQL Injection
  - Object Oriented Style
- PDO
  - Object Oriented
  - Abstract Layer
- ORM

## Quick View III

- Guestbook
  - change the storage to MySQL database.

# Thank you!
